

How to read your electricity meter on the 19th of every month

Your meter reading will help Manitoba Hydro to provide an accurate bill. They use meter readings to bill you for the actual amount of electricity you use (instead of estimating).

A meter reading card is on the back of your monthly hydro bill. Use this card to record your meter reading, and then submit it to their 24-hour phone recording line.

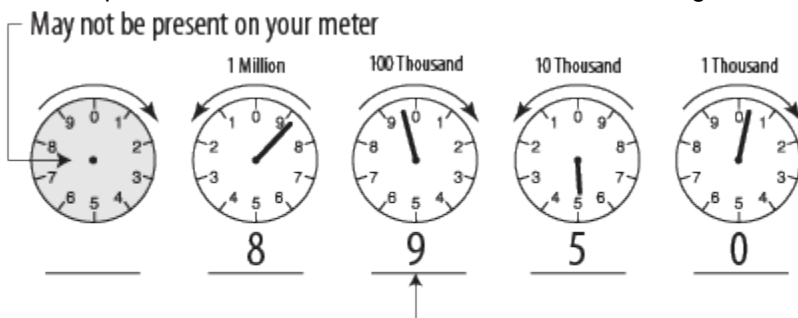

Reminder:
Please read your meter on the 19th of every month

Many electricity meters have 4 dials. However, meters with 5 dials or digital displays are also common.

The meter number is displayed on your electricity meter. When entering your meter number, do not include the letters **MH**. Instead, add another zero at the beginning to make a 7-digit number. The above meter shows **MH062189**, so this meter number would be **0062189**.

Dial display:

1. Draw the exact position of the dials hands of your electricity meter on the blank dials on the meter reading card.
2. From the position of the dial hands, record the meter reading under the dials. (See example reading shown below.)

Information courtesy of Manitoba Hydro website

If the dial hand is between two numbers, please record the lower number.
If the dial hand is between 9 and 0, then 9 is the lower number.

Digital display:

1. Wait for the electricity meter display to show the letters "kWh" along with the reading.
2. Record the meter reading on the lines under the dials on the meter reading card.
Submit your reading toll free at 1-800-652-4490 anytime and follow the prompts to provide your 7-digit meter number and your meter reading.

For further assistance, contact the Powerview District Office at **(204)367-2617**.
